

# Waste incineration

Monitoring issues

Abel Arkenbout  
**ToxicoWatch**

- **Introduction**
- **Case Incinerator REC, Harlingen, The Netherlands**
- **National research backyard chicken egg**
- **Monitoring emissions**
- **Tolerable daily intake of dioxins**
- **Conclusion**

# Case Harlingen, The Netherlands

**Situated near the UNESCO Wadden Sea,  
mostly agricultural economy**

## Incinerator REC, Harlingen, the Netherlands

**2011 Waste to Energy Incinerator 'REC'**  
**Model 'state of the art' incinerator,**  
**the best and cleanest of Europe**

In NI biomonitoring by industry itself

Agro-economical research

Crowdfunding

ToxicoWatch biomonitoring research

# Monitoring dioxins (WUR)

## Biomonitoring program

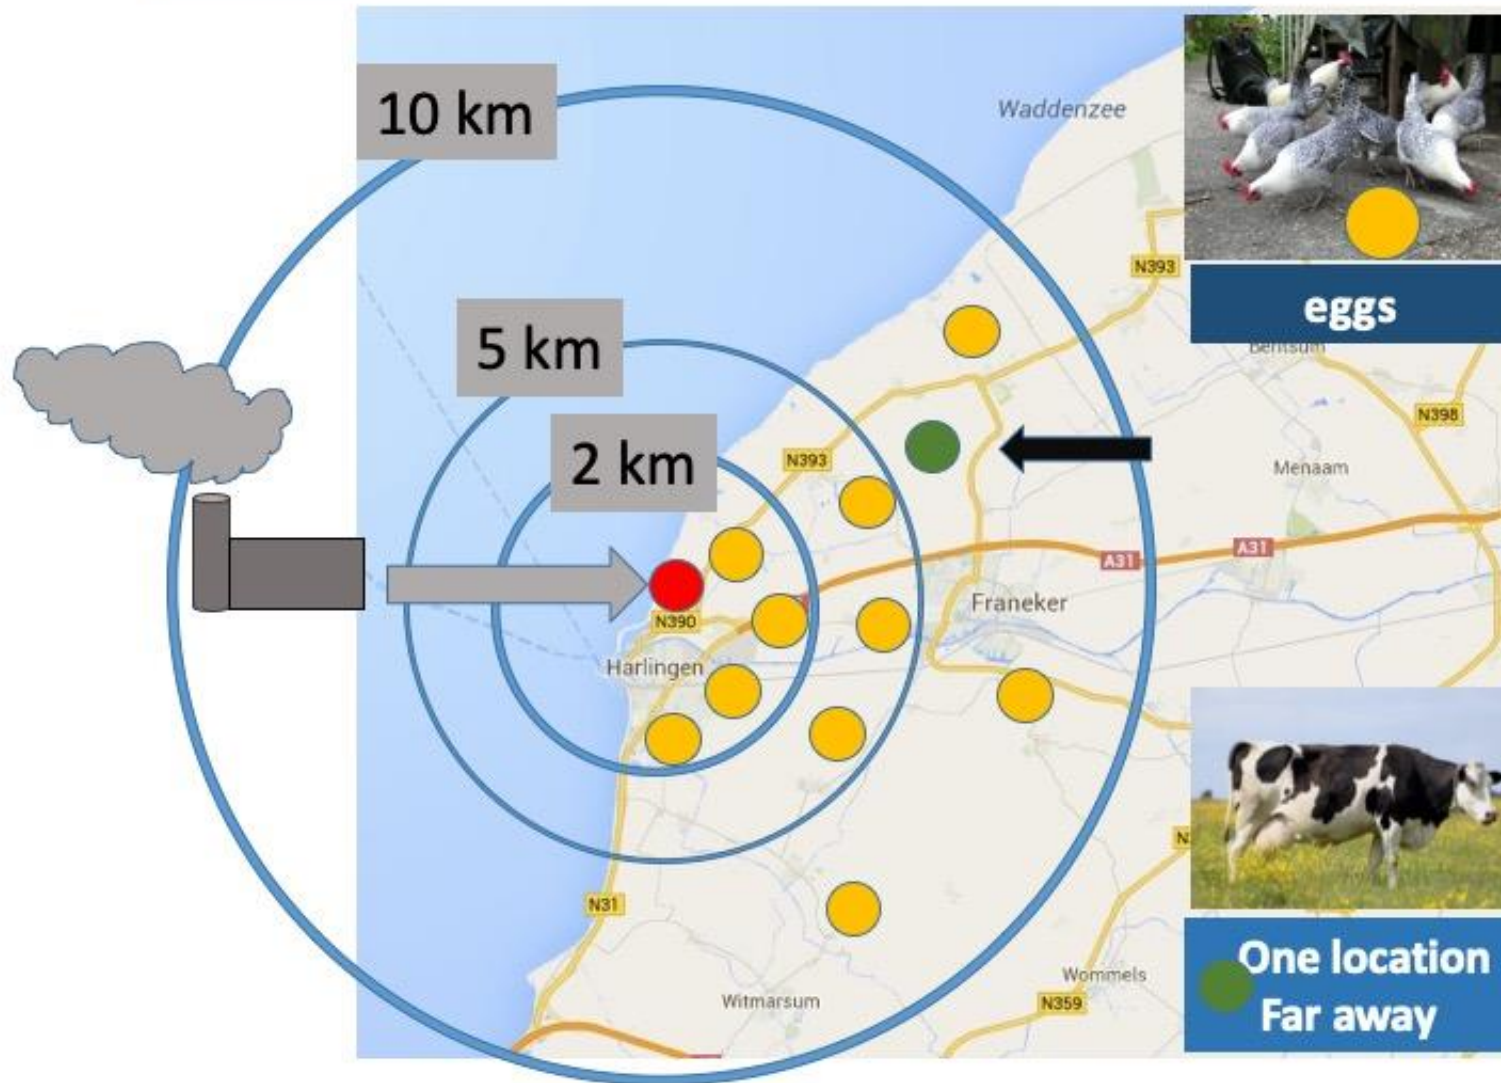

Milk of cows

Biomonitoring  
EnergieCentrale  
de Reststoffen  
> 5 km

one composite  
sample

**WUR: Never find elevated dioxins in the environment**

## TW sampling

At more ( $n > 10$ ) locations (1-10 km) composite samples of 10 eggs/location of backyard chickens:

local and areal coverage = counteracting heterogeneity

## Composite-sampling

More sampling

Spatial trends

# Biomarker egg backyard chicken

Bioaccumulation  
Biomagnification  
Biotransformation  
Xenobiotical metabolism

# Environmental Biomarkers

## CALUX

Broad spectrum of applications  
Cost-efficient  
Rapid and sensitive technology  
Can be used as pilot screening research  
Reliable in results

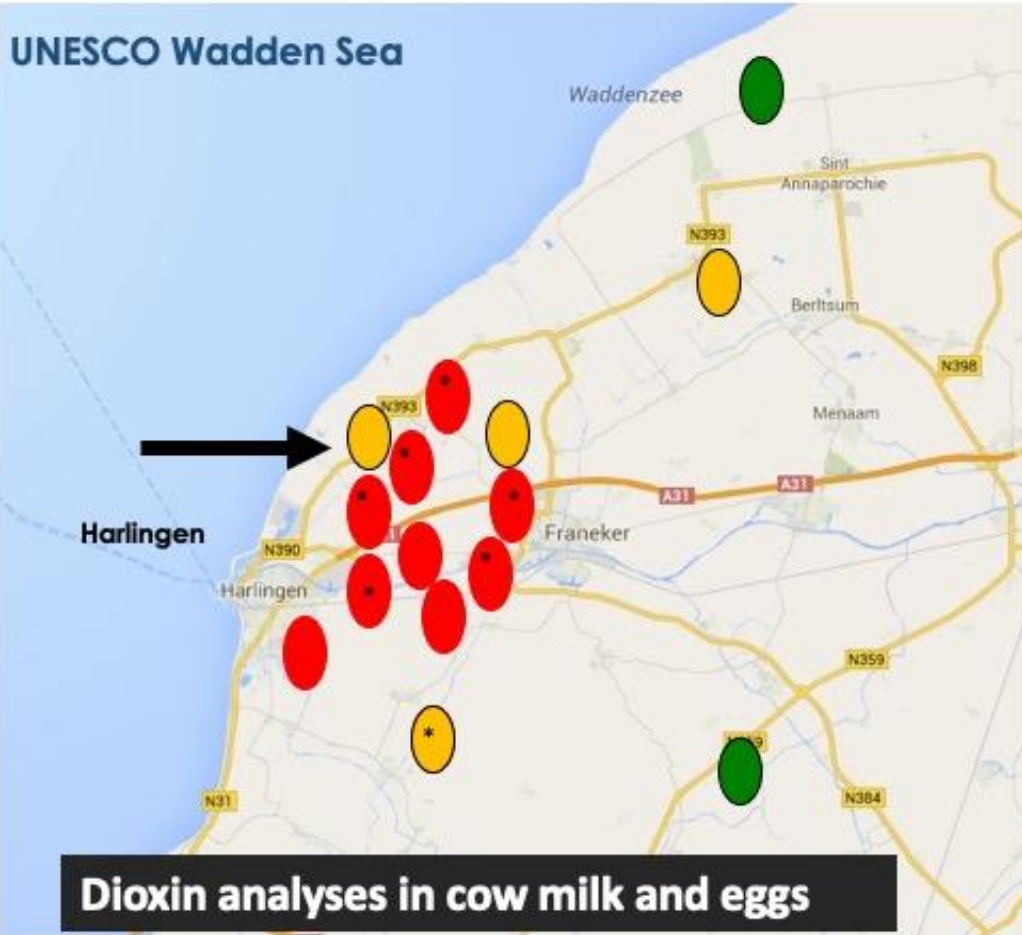

# Chemical vs biological analysis

Chemical analysis

bioassay

## Bioassay

- Eggs RIKILT
- Eggs ToxicoWatch

### DR CALUX®

- > 3,4 pg BEQ /g fat
- > 1,7 pg BEQ /g fat
- < 1,7 pg BEQ /g fat

\* GC-MS

BEQ: Bioanalytical Equivalents

Distance

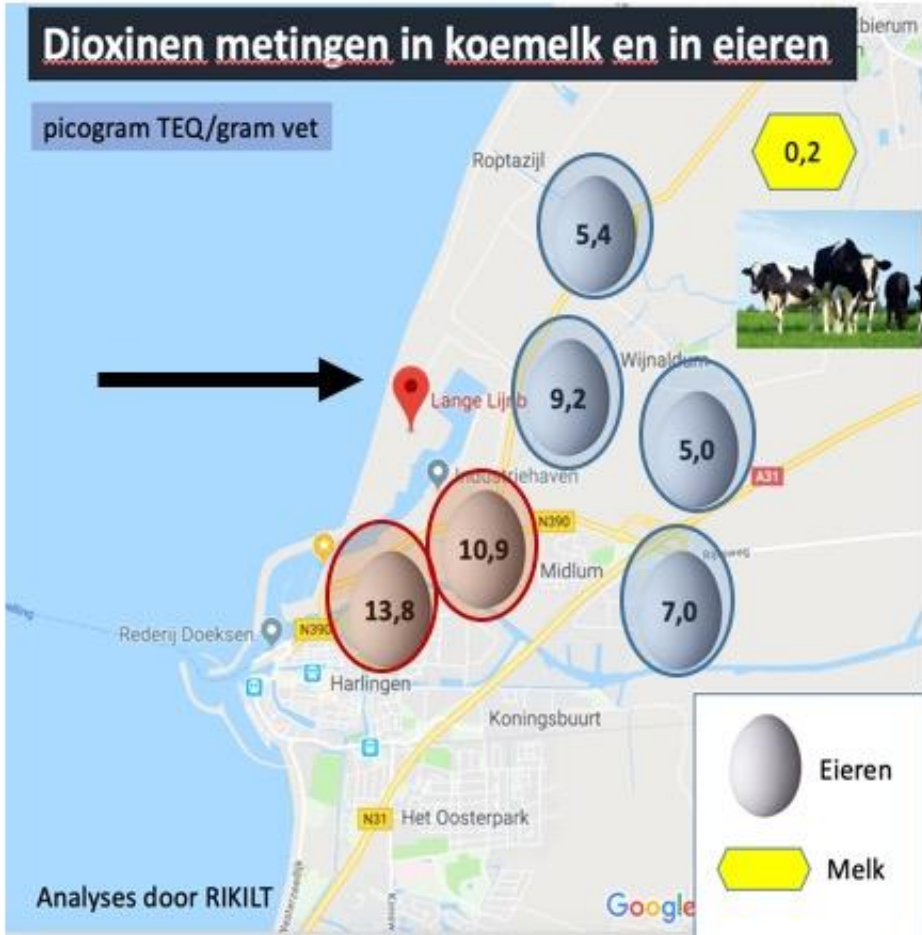

10 km

## Chemical analysis

### Dioxinen metingen in koemelk en in eieren

picogram TEQ/gram vet

Analyses door RIKILT

Discrepancy results eggs and milk

## Hidden emissions: A story from the Netherlands

*Case Study*

November 2018 – ToxicoWatch

“ We must urgently revise the rules for emissions monitoring for waste incineration, to protect people’s health and safety.

## Official measurements

### Short-term

Sampling: 0,1 % of a year

- 12 hours measurement period ( 2 x 6 hours)
- Only under steady state conditions\*
- Pre-announced
- Only PCDD/F

**Results < 0,00001 ng TEQ/Nm<sup>3</sup>**

## Accurate measurements

### long-term

Sampling: 95 % of a year

Adsorption **M**ethod for **S**ampling of dioxins  
**AMESA**

Long time measurements

Other Than Normal Conditions (OTNOC)

Continuously sampling

Analysing other UPOPs

**Results > 0,1 ng TEQ/Nm<sup>3</sup>**

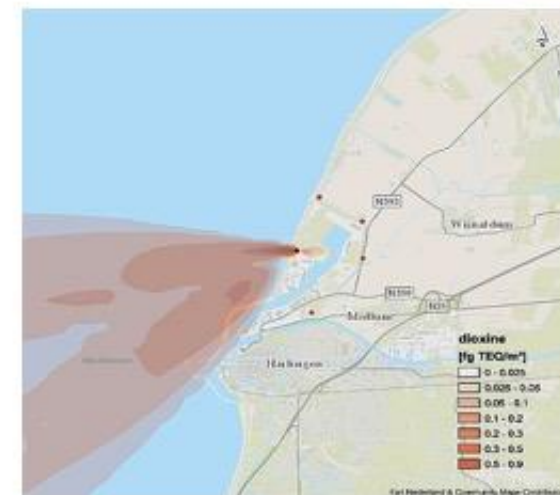

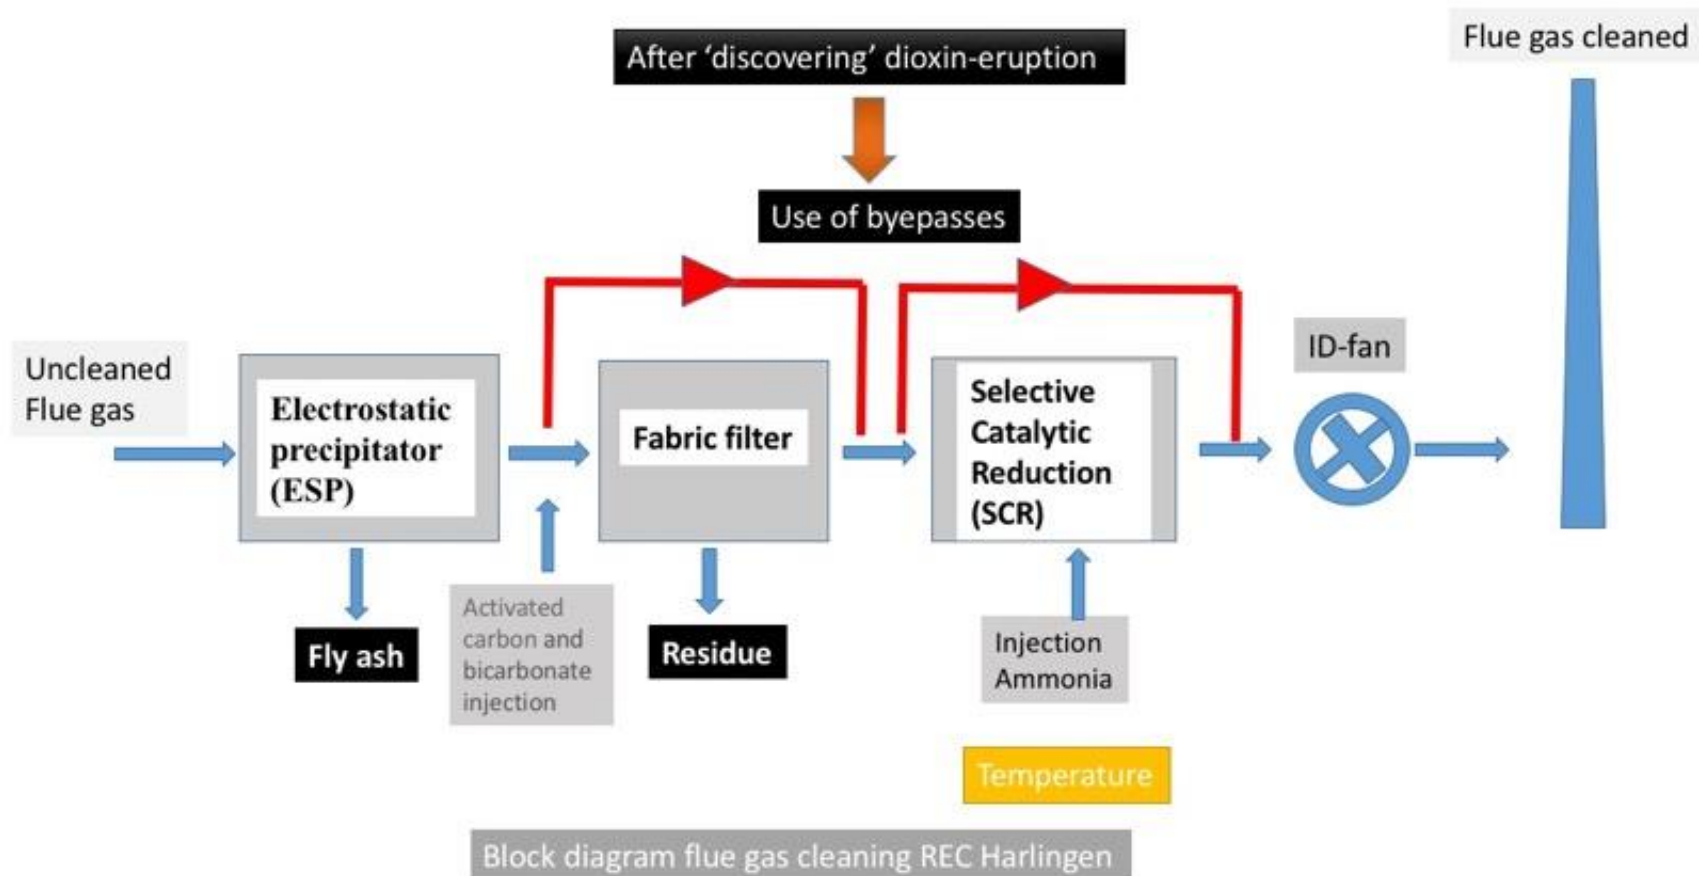

# Hidden Emissions (#1 sampling error)

Sampling	Hours	ng TEQ/Nm3	Factor
Short-term, March 30, 2016	6	<0,00001	
Long-term, March 26– April 26, 2016	256	0,01290	>1290
Short-term, 8 March 2017	6	0,00001	
Long-term March 7 – April 5, 2017	690	0,00460	460

No representativeness of official measurements

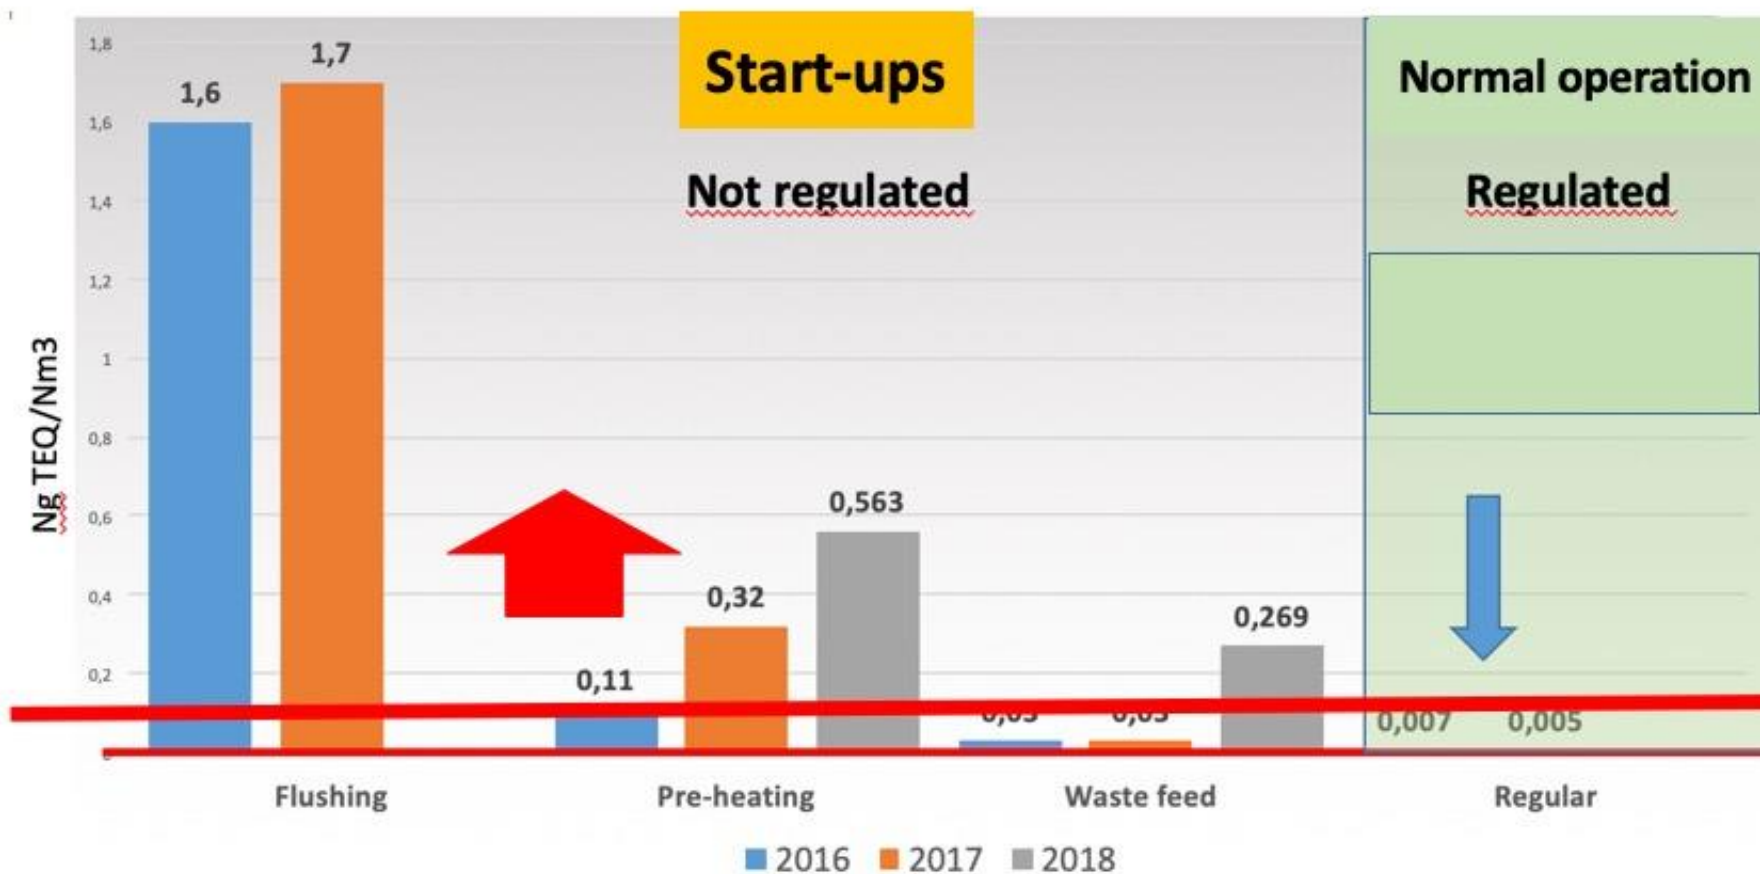

# Hidden Emissions (#2 bypasses)

**Incinerator uses bypasses of Air Pollution Control Devices, still in Dutch juridical court (ToxicoWatch)**

# Hidden Emissions (#3 OTNOC)

Emissions during Other Than **Normal** Operation Conditions (OTNOC)

EU norm  
0,1 ng TEQ/Nm3

Measured during three start-ups 2016, 2017 and 2018

## Emissions of other UPOPs (#4 UPOPs)

**Not  
regulated**

**Dioxin-like PolyChlor Biphenyls (dl-PCBs)**

**PolyBrominated Biphenyls (dl-PBBs)**

**PolyBrominated DiBenzoDioxines/Furans (PBDD/F)**

**Mixed halogenated Dioxines & Furans (PBDD/F)**

**PolyBrominated DiphenyEthers (PBDE)**

**PolyAromatic Hydrocarbon (PAH)**

**PFOA and PFOS**

**All detected in flue gas with AMESA long-term sampling**

# Emissions of other UPOPs (#4 UPOPs)

Perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) emissions

Polybrominated dibenzodioxins and -furans (PBDD/F) emissions

Emissions dioxin-like polychlorinated biphenyls during 7 months

Polycyclic aromatic hydrocarbon emissions from waste incineration

Long-term sampling research AMESA 2016, 2017 and 2018 at the REC Harlingen

# Hidden temperatures (#5 UPOPs)

Waste

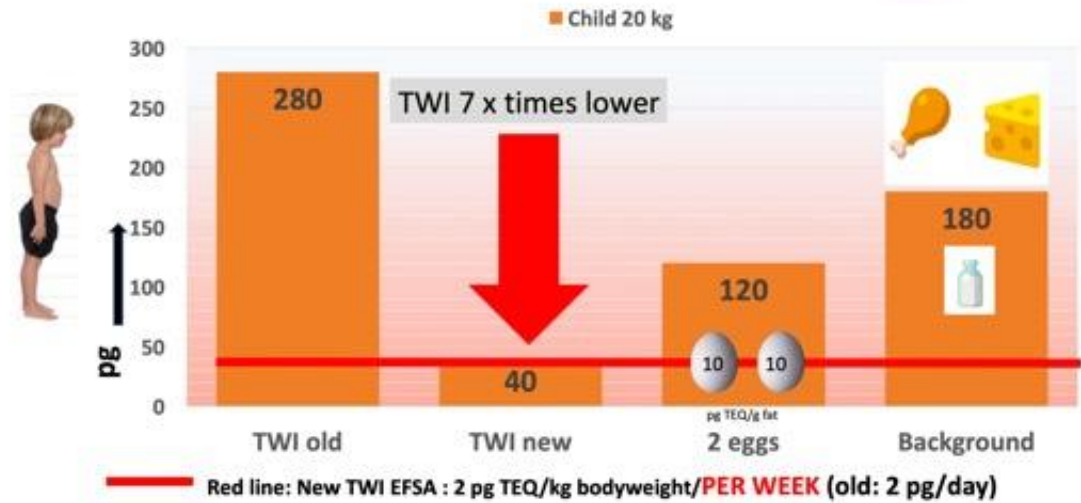

Emissions implications when combustion temperatures are insufficient

# Tolerable intake level dioxins strongly revised downwards

Die spannende und aufschlussreiche Podiumsdiskussion wurde moderiert vom ehemaligen Leiter und Vorstandsvorsitzenden des Chemischen- und Veterinäruntersuchungsamt Münsterland-Emscher-Lippe (CVUA-MEL), Prof. Dr. Peter Fürst (4. von links). Diskutiert haben dabei die renommierten Wissenschaftler v.l.n.r. Dr. Ron Hoogenboom (Mitglied der EFSA und zuständig für Lebensmittel- und Umweltmittelkontaminationen im RIKILT Wageningen Institut Niederlande), Dr. Frank Neugebauer (leitender Wissenschaftler an der Eurofins GfA Lab Service GmbH in Hamburg), Prof. Dr. Heidelore Fiedler (Professor der Chemie, leitet derzeit ein Großprojekt zur Umweltüberwachung von POPs in Schweden) und Dr. Abel Arkenbout (Wissenschaftler und CEO der Toxicowatch Foundation für Beratung und Betreuung von Themen rund um POPs, Niederlande).

Tolerable Weekly Intake pg DIOXINS Child (20 kg) EFSA **NEW**

Tolerable Weekly Intake DIOXINS Person (70 kg) EFSA **NEW**

“

Dioxins are still a serious issue, the health of the population is still under threat.

TOXICOWATCH
